EASE OF ACCESS AIMS TO BRIDGE THE GAP BETWEEN TRADITIONAL ACCESSIBILITY TOOLS AND MODERN AI-DRIVEN INTERACTION, GIVING USERS NEW WAYS TO NAVIGATE AND CONTROL THEIR SYSTEM WHEN STANDARD I/O DEVICES FAIL OR USERS THAT FIND IT DIIFUCULT TO USE THEM PROPERLY IN THE FIRST PLACE.
THE APPLICATION ABSTRACTS AND UNIFIES ACCESSIBILITY FEATURES INTO A CLEAN WINUI3/WPF MODULAR SYSTEM THAT FUNCTIONS AS AN INTEGRATED BACKGROUND PROCESS TO ADAPT TO DIFFERENT ACCESSABILITY REQUIREMENTS WITHOUT OVERWHELMING THE USER. THIS ALLOWS USERS TO CONTROL THEIR COMPUTER THROUGH MULTIPLE AVENUES — FROM TURNING THE KEYBOARD INTO A MOUSE TO USING PHYSICAL MOVEMENT AS AN INPUT METHOD.
